inductive load: L=0.5mH, 60A (on)/35A (off)	>1x10 ⁵ ops. ⁵⁾
resistive load: 40A (on)/40A (off)	>1x10 ⁵ ops. ⁵⁾
capacitive load 200A (on)/20A (off)	>1x10 ⁵ ops. ⁵⁾

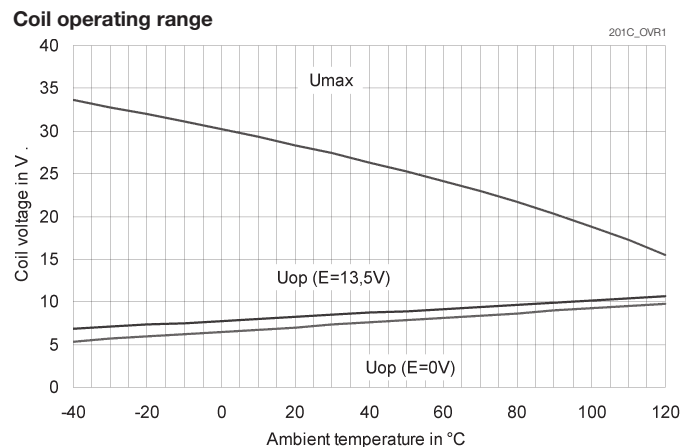

Contact Data (continued)	
Mechanical endurance	>2x10 ⁶ ops.
1) Measured on 70x70x1.5mm epoxy PCB FR4 with 52cm ² (double layer 140µm) copper area.	
2) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 13.5VDC for 12VDC load voltages.	
3) See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/	
4) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding (monostable version only).	
5) Be aware of using right polarity, see Terminal Assignment. Wrong polarity will reduce endurance.	

Coil Data					
Rated coil voltage	12VDC				
Coil versions, DC coil					
Coil code	Rated voltage VDC	Operate voltage VDC	Release voltage VDC	Coil resistance Ω±10%	Rated power mW
001/005	12	6.9	1.5	176	818

All figures are given for coil without pre-energization, at ambient temperature +23°C. Other coil voltages on request.

Load limit curve: safe shutdown, no stationary arc/make contact.
Load limit curves measured with low inductive resistors verified for 1000 switching events.

Does not take into account the temperature rise due to the contact current
E = pre-energization.
